HTML and CSS validation

HTML validation only showed the a warning for a lack of header for the article, which I disregarded, as that is how the starter file was set up.

CSS validator said that shape-outside and shape-margin don't exist. They clearly do, so I disregarded this. Warnings were standard for the CSS variables. The last warning that .censored has the same background-color and color was intentional. It's censored!

W3C CSS Validator results for TextArea (CSS level 3 + SVG)

Sorry! We found the following errors (3)

URI : TextArea

237 .censored	Same color for :background-color and :color

CSS-disabled reading order

When viewing the page with CSS disabled I felt the need for the following change to the reading order:

- Moved the crawler-badge above the <h1> - this gives the page topic (eyebrow) the Crawler number, then the header with the crawler's name.

L2-L3 · Princess Donut's Royal Steed

A rendition of Mongo, Princess Donut's companion and Royal Steed. Image Created used Adobe Firefly

Aquired during the second level of her dungeon crawl from a Pet Reward Room, Mongo is Princess Donut's pet mongoliensis. This blue and pink velociraptor appearing critter his hot-headed and always ready to chomp, although is nose-chomping days are behind him since he bonded with Donut. She affectionately calls him her child, and is fiercely protective of him.

"Mongo is appalled."

-Princess Donut · Carl's Dragonair Shavuno

Princess Donut can often be seen sitting astride him on a magical saddle, which increases Mongo's damage when she is in place. After receipt of this saddle Mongo was upgraded from Royal Companion to Royal Steed. Together they make a fearsome and blood-thirsty team.

While Mongo rarely shows his feelings, when certain unsavory comments or events happen, Donut is quick to express his disgust with said events, usually in the form of her much famed quote, "Mongo is appalled".

As his kind are pack-hunters, Mongo takes his lead from Princess Donut, recognizing her as his pack-

While Mongo rarely shows his feelings, when certain unsavory comments or events happen, Donut is quick to express his disgust with said events, usually in the form of her much famed quote, "Mongo is appalled".

As his kind are pack-hunters, Mongo takes his lead from Princess Donut, recognizing her as his pack-superior. When situations arise where he is endangered, or unruly, Princess Donut utilizes a magical pet carrier to contain him and keep him safe and compliant, although she is always quick to release him as soon as circumstances allow.

200% zoom

keyboard focus

All links properly displayed a focus outline when tabbed through with keyboard focus. No links were obscured. The default border color is the same color as the pull-quote background, so that specific focus item was targeted and given a teal background to provide proper contrast.

long-title and doubled-paragraph content growth

I tripled the length of my longest title and doubled the paragraph content then resized the page. Positioned and layered elements still behaved as expected, with the exception of the sunglasses layer at very small widths. I was unable to absolutely position the sunglasses so that they overlapped the scaling cat image below without an annoying amount of media queries. Rather than cluttering my CSS, I chose to absolutely position the sunglasses in the top right of the section when it became less than 579px. I chose this number because that was where the overlay positioning began to change much more rapidly, due to the title wrapping to a second and third line quickly.

579px & wider

578px & narrower

Inclusive Form Flow Documentation

sticky behavior at page and section boundaries

My sticky quote behaved exactly as expected, sitting in normal flow until it reached the top of the viewport, after which it stuck to the top until the section ended, then it scrolled off screen.

pointer activation of every layered link/control

All layered links were checked for proper pointer activation. All displayed with pointer finger.

clip-path and shape-outside disabled

Disabling the clip path and shape outside behaved as expected. The clipped Mongo image returned to its original rectangular shape. The text no longer flowed along the edges of the cat, but went crisply down the left side of the floated image box.

stacking-context inspection for all layered elements.

I am not sure what this section is asking for specifically. All layered elements were checked to make sure they did not obscure anything that wasn't meant to be covered. Positioning was checked extensively for all layered items.

AI Disclosure:

I discussed positioning of my sunglasses over the cat image, explaining the problem I was having at smaller screen sizes, but the AI was not helpful in my endeavor, and I discarded its input and went with my solution of true fixed positioning at smaller sizes instead.
